

## Assignment #9

Due on Monday, October 15, 2018

**Read** Section 3.3 on *Linear Approximation and Differentiability*, pp. 113–123, in Baxandall and Liebek's text.

**Read** Section 4.3 on *Differentiable Scalar Fields* in the class Lecture Notes at <http://pages.pomona.edu/~ajr04747/>.

**Do** the following problems

1. Let  $U = \mathbb{R}^n \setminus \{\mathbf{0}\} = \{v \in \mathbb{R}^n \mid v \neq \mathbf{0}\}$  and define  $f: \mathbb{R}^n \rightarrow \mathbb{R}$  by  $f(v) = \|v\|$  for all  $v \in \mathbb{R}^n$ .

- (a) Prove that  $f$  is differentiable on  $U$ .  
(b) Prove that  $f$  is not differentiable at the origin in  $\mathbb{R}^n$ .

2. Let  $f: \mathbb{R}^3 \rightarrow \mathbb{R}$  be given by  $f(x, y, z) = x^2y + y^2z + z^2x$ , for all  $(x, y, z) \in \mathbb{R}^3$ . Compute all the first partial derivatives of  $f$  and verify that

$$x \frac{\partial f}{\partial x} + y \frac{\partial f}{\partial y} + z \frac{\partial f}{\partial z} = 3f.$$

3. Find the gradient of  $f$  for each of the following scalar fields:

- (a)  $f(x, y, z) = xe^{yz}$ ,  
(b)  $f(x, y, z) = 1/\sqrt{x^2 + y^2 + z^2}$ ,  $(x, y, z) \neq (0, 0, 0)$ .

4. Let  $f(x, y) = \begin{cases} (x^2 + y^2) \sin\left(\frac{1}{x^2 + y^2}\right), & \text{if } (x, y) \neq (0, 0); \\ 0, & \text{if } (x, y) = (0, 0). \end{cases}$

- (a) Show that the partial derivatives of  $f$  with respect to  $x$  and  $y$  do exist at  $(0, 0)$ , and compute  $\frac{\partial f}{\partial x}(0, 0)$  and  $\frac{\partial f}{\partial y}(0, 0)$ .  
(b) Show that the partial derivatives of  $f$  with respect to  $x$  and  $y$  are not continuous at  $(0, 0)$ .

5. Let  $f$  be as in the previous problem. Show that  $f$  is differentiable at  $(0, 0)$ , and compute  $Df(0, 0)$ .
