## Review Problems for Exam 1

(1) There are 5 red chips and 3 blue chips in a bowl. The red chips are numbered $1,2,3,4,5$ respectively, and the blue chips are numbered $1,2,3$ respectively. If two chips are to be drawn at random and without replacement, find the probability that these chips are have either the same number or the same color.
(2) A person has purchased 10 of 1,000 tickets sold in a certain raffle. to determine the five prize winners, 5 tickets are drawn at random and without replacement. Compute the probability that this person will win at least one prize.
(3) Let $(\mathcal{C}, \mathcal{B}, \operatorname{Pr})$ denote a probability space, and let $E_{1}, E_{2}$ and $E_{3}$ be mutually disjoint events in $\mathcal{B}$. Find $\operatorname{Pr}\left[\left(E_{1} \cup E_{2}\right) \cap E_{3}\right]$ and $\operatorname{Pr}\left(E_{1}^{c} \cup E_{2}^{c}\right)$.
(4) Let $(\mathcal{C},\lrcorner \dashv \mathcal{B}, \operatorname{Pr})$ denote a probability space, and let $A$ and $B$ events in $\mathcal{B}$. Show that

$$
\operatorname{Pr}(A \cap B) \leq \operatorname{Pr}(A) \leq \operatorname{Pr}(A \cup B) \leq \operatorname{Pr}(A)+\operatorname{Pr}(B) .
$$

(5) Let $(\mathcal{C}, \mathcal{B}, \operatorname{Pr})$ denote a probability space, and let $E_{1}, E_{2}$ and $E_{3}$ be mutually independent events in $\mathcal{B}$ with probabilities $\frac{1}{2}, \frac{1}{3}$ and $\frac{1}{4}$, respectively. Compute the exact value of $\operatorname{Pr}\left(E_{1} \cup E_{2} \cup E_{3}\right)$.
(6) Let $(\mathcal{C}, \mathcal{B}, \operatorname{Pr})$ denote a probability space, and let $E_{1}, E_{2}$ and $E_{3}$ be mutually independent events in $\mathcal{B}$ with $\operatorname{Pr}\left(E_{1}\right)=\operatorname{Pr}\left(E_{2}\right)=\operatorname{Pr}\left(E_{3}\right)=\frac{1}{4}$. Compute $\operatorname{Pr}\left[\left(E_{1}^{c} \cap E_{2}^{c}\right) \cup E_{3}\right]$.
(7) A bowl contains 10 chips of the same size and shape. One and only one of these chips is red. Draw chips from the bowl at random, one at a time and without replacement, until the red chip is drawn. Let $X$ denote the number of draws needed to get the red chip.
(8) Let $X$ have pmf given by $p_{X}(x)=\frac{1}{3}$ for $x=1,2,3$ and $p(x)=0$ elsewhere. Give the pmf of $Y=2 X+1$.
(9) Let $X$ have pmf given by $p_{X}(x)=\left(\frac{1}{2}\right)^{x}$ for $x=1,2,3, \ldots$ and $p_{X}(x)=0$ elsewhere. Give the pmf of $Y=X^{3}$.
(10) Let $f_{X}(x)=\left\{\begin{array}{ll}\frac{1}{x^{2}} & \text { if } 1<x<\infty ; \\ 0 & \text { if } x \leq 1,\end{array}\right.$ be the pdf of a random variable $X$. If $E_{1}$ denote the interval $(1,2)$ and $E_{2}$ the interval $(4,5)$, compute $\operatorname{Pr}\left(E_{1}\right), \operatorname{Pr}\left(E_{2}\right), \operatorname{Pr}\left(E_{1} \cup E_{2}\right)$ and $\operatorname{Pr}\left(E_{1} \cap E_{2}\right)$.
(11) A mode of a distribution of a random variable $X$ is a value of $x$ that maximizes the pdf or the pmf. If there is only one such value, it is called the mode of the distribution. Find the mode for each of the following distributions:
(a) $p(x)=\left(\frac{1}{2}\right)^{x}$ for $x=1,2,3, \ldots$, and $p(x)=0$
(b) $f(x)= \begin{cases}12 x^{2}(1-x), & \text { if } 0<x<1 ; \\ 0, & \text { elsewhere } .\end{cases}$
(12) Let $X$ have pdf $f_{X}(x)= \begin{cases}2 x, & \text { if } 0<x<1 \text {; } \\ 0, & \text { elsewhere } .\end{cases}$

Compute the probability that $X$ is at least $3 / 4$, given that $X$ is at least $1 / 2$.
(13) Divide a segment at random into two parts. Find the probability that the largest segment is at least three times the shorter.
(14) Let $X$ have pdf $f_{X}(x)= \begin{cases}x^{2} / 9, & \text { if } 0<x<3 ; \\ 0, & \text { elsewhere } .\end{cases}$

Find the pdf of $Y=X^{3}$.
