## Assignment \#13

## Due on Wednesday, March 25, 2015

Read Section 5.3 on Analysis of General Systems in the class lecture notes at http://pages.pomona.edu/~ajr04747/

Read Section 5.1, on Equilibrium Point Analysis, in Blanchard, Devaney and Hall.
Read Section 5.2, on Qualitative Analysis, in Blanchard, Devaney and Hall.
Do the following problems
In problems (1)-(5), given the two-dimensional system, (b) sketch the nullclines; (b) determine the critical points; (c) find the derivative of the vector field associated with the system; (d) determine the stability of the origin for each linearized system; (e) use the principle of linearized stability (when applicable) to determine the stability type of each equilibrium point of the non-linear system; and (f) sketch the phase portrait.

1. $\left\{\begin{array}{l}\dot{x}=-3 x+2 x y ; \\ \dot{y}=-4 y+3 x y .\end{array}\right.$
2. $\left\{\begin{array}{l}\dot{x}=x(1-2 y) ; \\ \dot{y}=y(x-1) .\end{array}\right.$
3. $\left\{\begin{array}{l}\dot{x}=y ; \\ \dot{y}=x-y-x^{3} .\end{array}\right.$
4. $\left\{\begin{array}{l}\dot{x}=y-x^{3} ; \\ \dot{y}=y-4 x .\end{array}\right.$
5. $\left\{\begin{array}{l}\dot{x}=x(1-2 x)-3 y ; \\ \dot{y}=y(x-1) .\end{array}\right.$
