Topics for Final Exam

1. Probability Spaces

- 1.1 Sample spaces
- 1.2 σ –Fields
- 1.3 Probability functions
- 1.4 Independent events
- 1.5 Conditional probability

2. Random Variables

- 2.1 Continuous and discrete random variables
- 2.2 Cumulative distribution function (cdf)
- 2.3 Probability density function (pdf) and probability mass function (pmf)

3. Expectations of Random Variables

- 3.1 Expected Value a random variable
- 3.2 Expected value of functions of random variables
- 3.3 Moments and moment generating function
- 3.4 Variance of a random variable

4. Joint Distributions

- 4.1 Joint distribution of two random variables
- 4.2 Marginal distributions
- 4.3 Independent random variables

5. Limiting Distributions

- 5.1 The Poisson distribution as a limit of binomial distributions.
- 5.2 Convergence in distribution
- 5.3 The mgf convergence theorem

6. The Central Limit Theorem

- 6.1 Statements of the central limit theorem
- $6.2\,$ Applications of the Central Limit Theorem

7. The Weak Law of Large Numbers

- 7.1 Markov and Chebyshev inequalities
- 7.2 Convergence in probability
- 7.3 The weak law of large numbers

Relevant chapters and sections in the lecture notes: Chapters 2, 3, 4, 5, 6, 7 and 8; Sections 9.1 and 9.2.

Relevant sections in the text: 1.4, 1.5, 1.6, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 3.4, 3.5, 3.7, 3.8, 3.9, 4.1, 4.2, 4.3, 4.4, 4.6, 5.2, 5.3, 5.4, 5.6, 6.2, 6.3, 6.4, 8.1, 8.2, and 8.5.

Important Concepts

Sample space; σ -field; probability function; probability space; random variable; continuous and discrete random variables; cumulative distribution function (cdf); probability mass function (pmf); probability density function (pdf); expectation; moments; moment generating function (mgf); variance; mgf uniqueness theorem; joint distributions; marginal distributions; independent random variable; convergence in distribution; limiting distribution; the mgf convergence theorem; the central limit theorem; convergence in probability; the weak law of large numbers.

Some Special Distributions.

Discrete random variables: discrete uniform, Bernoulli, binomial, geometric, hypergeometric, Poisson.

Continuous random variables: Uniform, exponential, normal, chi-square and gamma.

Important skills

Know how to compute probabilities of events and apply the properties of probability; know how to compute conditional probabilities and apply the properties of conditional probability; know how to compute the cdf and the pdf (or pmf) of random variables; know how to compute expectations, moments, variance and moment generating functions of random variables; know how to compute the joint cdf and the joint pdf (or pmf) of two or more random variables; know how to compute marginal distributions; know how to compute probabilities based on joint distributions; know how to compute expectations of functions of random variables; know how to use independence; know how to apply the mgf uniqueness theorem; know how to apply the mgf convergence theorem; know how to apply the central limit theorem; know how to apply CHebyshev's inequality.
