

# OFF-DIAGONAL METRIC WORKSHEET

Consider the following general diagonal metric:

$$ds^2 = -A(dx^0)^2 + 2Fdx^0dx^1 + B(dx^1)^2 + C(dx^2)^2 + D(dx^3)^2$$

where  $dx^0$ ,  $dx^1$ ,  $dx^2$ , and  $dx^3$  are arbitrary coordinates and  $A$ ,  $B$ ,  $C$ ,  $D$ , and  $F$  are arbitrary functions of all of the coordinates. This worksheet allows you to quickly calculate the components of  $\Gamma_{\mu\nu}^\alpha$  and  $R_{\mu\nu} \equiv +R^\alpha_{\mu\alpha\nu}$  for any specific special case of such a metric. In this worksheet, I use these shorthand notations:

$$H \equiv AB + F^2, \quad A_0 \equiv \frac{\partial A}{\partial x^0}, \quad B_{12} \equiv \frac{\partial^2 B}{\partial x^1 \partial x^2}, \text{ and so on.}$$

To use this worksheet, start by crossing out each tabulated term that is zero for the specific metric in question. For the remaining terms, write the term's value in the space above that term. For the Ricci tensor components, you can then gather the terms in the space provided at the bottom. To adapt this worksheet to smaller dimensional spaces or spacetimes, treat the metric components corresponding to any nonexistent coordinates as if they had the value 1 and the remaining metric components as being independent of the nonexistent coordinates.
